

# Sterile Sample Bag (For Liquid)

### [Application]

Used for aseptic collection of liquid samples (milk, soy milk, juice, purified water, mineral water, etc.).

## [Advantage]

Ready to use after sterilization by gamma irradiation. No need to autoclave, wash and dry.

#### [Instructions]

Take a sterile water sample collection bag, unscrew the lid, and add the collected Liquid sample to the 200ml or 500ml **graduation line** of the bag (for the sample volume standard.) Tighten the lid.

#### **Sterilization Method**

Gamma-ray radiation sterilization

## **Specifications**

AL-BG500E: 500ml, 10pcs/bag, 10bags/carton. AL-BG200E: 200ml, 10pcs/bag, 10bags/carton.

#### Shelf life

Two years

#### [Precautions]

- 1. Hand pinch the neck of the bag mouth.
- 2. Gently shake the bag to be fully opened.
- 3. The line of sight is parallel to the 200ml or 500ml graduation scale.
- 4. Avoid contaminating the bag mouth with fingers or other objects.
